NAMIBIE
2012

Les membres de la tribu Herero portent des tenues victoriennes et des uniformes paramilitaires en commémoration de la colonisation allemande du début du XXe siècle.

Au moment de la colonisation européenne de l'Afrique, les missionnaires rhénans ont converti les Herero et les ont habillés selon la mode européenne. Au fil des années, cette tenue est devenue une tradition Hérero et une forme de fierté.

En 1904, alors que la guerre a éclaté entre les colons allemands et les tribus locales, la tribu Herero a perdu près de 80% de sa population. Les tenues vestimentaires sont alors devenues un symbole de l'identité en des temps fragiles - après avoir tué un soldat allemand, les guerriers hereros enlevaient ainsi l'uniforme du soldat et l'adoptaient pour prouver leur victoire et vaillance au combat.

**HONG KONG
OCTOBRE 2019**

Kelvin, 20 ans, étudiant de Yau Tsim Mong, pose pour un portrait dans un studio à Chai Wan.

Hong Kong est une enclave semi-autonome de la Chine aux traditions libérates.

Lorsque les manifestants sont descendus dans la rue en juin 2019, ils avaient pour objectif le retrait d'un projet de loi qui aurait permis des extraditions vers la Chine continentale. Celui-ci a été retiré mais les manifestations se sont poursuivies contre l'autoritarisme. Malgré des manifestations continues, la Chine a imposé une nouvelle loi sur la sécurité nationale à Hong Kong le 30 juin 2020. Cette loi met en place un vaste appareil de sécurité sur le territoire et donne à Pékin de larges pouvoirs pour réprimer une variété de crimes politiques, dont le séparatisme et la collusion.

#DYSTURB

DISTRICT DE BID, MAHARASHTRA, INDE. NOVEMBRE 2019.

Des coupeurs de canne à sucre sont en route vers l'état de Kamakata pour débuter la récolte dans les plantations.

En mai 2019, des militants de la région ont découvert qu'un nombre anormalement élevé de femmes, toutes travaillant dans les plantations, avaient subi une hysterectomie (ablation totale de l'utérus). Les taux atteignent 35% des femmes dans certains villages. Cette région du sud du pays fournit la majeure partie de la main-d'œuvre de la « ceinture sucrière ». Ces travailleurs sont particulièrement enclins à des problèmes de santé en raison de la nature de leur travail. Pourtant, les femmes n'ont pas la possibilité de prendre des congés lorsqu'elles sont

malades ou pendant leurs règles, car elles se voient infliger une amende allant jusqu'à 500 roupies pour chaque journée de travail manquée. En outre, le mariage des enfants, les grossesses répétées à un très jeune âge sans assistance ni suivi médical, ou la stérilisation systématique sont courants chez les femmes de ces zones rurales, mettant leur corps à l'épreuve.

Par conséquent, les femmes souffrent de problèmes de santé tels que des saignements excessifs, des écoulements blancs ou des douleurs utérines. Dans la plupart des cas, elles consultent d'abord un médecin du secteur public de la santé, mais les hôpitaux

#WOMENMATTER #ENDFGM

manquent souvent d'équipements adéquate et les femmes finissent par consulter des médecins du secteur privé. Ces médecins abusent de la vulnérabilité de leurs patientes et de leur manque de connaissance médicale pour les convaincre qu'une hysterectomie est la seule solution. La recherche du profit est cependant la seule raison de cette opération, dont le prix est fixé librement par les praticiens.

NEAR GÄLLIVARE, SWEDEN
MARCH 2011

Sven Skaltje was saddened to find the carcasses of two female reindeer whose antlers had become entangled during a dominance struggle in northern Sweden. He estimates it took three days for them to die of starvation. After separating the bodies, he saw from the ear markings that one belonged to him and the other to his cousin.

This image is part of a larger body of work, Sami - The People Who Walk With Reindeer. This work explores the symbiotic relationship between Sámi reindeer herders and the environment, their existence in today's world and their ancestral roots.

CAYAPAS MATAJE RESERVE, ECUADOR 2013

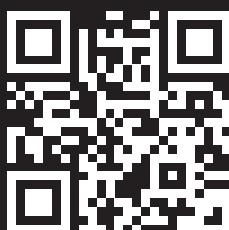

A group of boys take a break from picking shells in the mangroves. Children as young as 9 years old pick shells amidst the mangroves to contribute to their families' economy. Even though black shells are a culinary delicacy in Ecuador, shell pickers are only paid 8 cents of a dollar per shell. On average, pickers will find between 50 and 100 shells in a day's work.

The mangroves of the Cayapas Mataje Reserve are the tallest in the world and one of the last vestiges of this type of ecosystem in the country. Mangroves are valuable in protecting coastal areas from tsunamis and rising sea levels caused by climate change.

TAQUARI, RIO BRANCO, BRAZIL
MARCH 2015

João Pereira de Araújo stands at the front door of his home. Due to frequent flooding in the area, his house is built on high stilts.

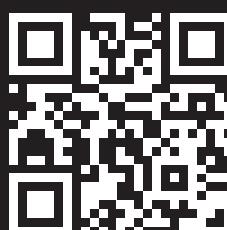

Floods in February and March 2015 impacted 53 neighbourhoods and approximately 87,000 people. The violence of this flood was the result of a combination of massive rains in the Andes and deforestation along the rivers.

"I have seen many in my life before, but never floods this high before. When I look out of the window from the top, all I can see is street submerged under the waters - so many homes and shops. All we can do now is wait for the water to go down, clean up and continue," João says.

JAKARTA, INDONESIA
FEBRUARY 20, 2016

Building materials are being brought to an open waste dump.

The world generates 3.5 million tons of solid waste per day, ten times more than a century ago. The average American throws away his own body weight every month, while Japan produces only one third of the waste per person compared to the USA.

With a sharp increase in the world population and growing economies in different parts of the world, we are producing more waste than ever. Open dumps have especially a severe environmental impact.

If the world is not prepared to think about waste reduction and actually treat waste as a resource, next generations will drown in their own waste.

POINT HOPE, ALASKA
JUNE 16, 2015

The traditional blanket toss occurs annually at the whaling feast in Point Hope, Alaska. For the Inupiat villagers nothing is more important than the bowhead whale. The calendar year revolves around hunting, fishing, and gathering, a lifestyle Alaskans call "subsistence," which is as much cultural tradition as economic necessity. The entire village looks forward to spring whaling, and celebrates a successful hunt with an annual feast.

In recent years, however, the much-anticipated whale hunt has run up against a warming arctic. Ice is getting thinner, windows of opportunity for hunting are shrinking and animal behavior is changing. At the time this photograph was made, Alaska had its hottest year on record in 2014, and for Inupiat villagers in Point Hope who have hunted and foraged their meals for generations, climate change now threatens their way of life.

NAPA, CALIFORNIA, USA
OCTOBER 9, 2017

Flames consume a main building at the Signorello Vineyards as the Atlas Fire burns in Napa.

By August 17, 2018, A total of 5,403 fires have burned an area of 975,739 acres (3,949 km²) across the state of California, according to the California Department of Forestry and Fire Protection and the National Interagency Fire Center. The active Mendocino Complex Fire has burned more than 370,000 acres (1,500 km²), becoming the largest complex fire in the state's history, after the complex's Ranch Fire surpassing the Thomas Fire to become California's single largest modern wildfire.

Climate change in California had already tremendous direct effects of global warming like drought and wildfire making the situation critical.
